SECURITY

Netscape Navigator 2.0 now lets you conduct online financial transactions privately and securely through the Secure Courier open protocol, which creates a secure digital envelope for financial data on the Internet. The secure MIME (S/MIME) open protocol for encryption and digital signatures also allows you to send and receive email and newsgroup messages securely.

Netscape Navigator 2.0 users can also create their own digital identities by getting an online Digital ID from VeriSign, which proves your online identity as an "Internet driver's license." With a Digital ID, Navigator 2.0 users are able to communicate via secure email, positively identify others, be authorized to access information, ensure privacy, and enable digital signatures. Noncommercial versions will be offered at no cost, with a VeriSign supported commercial version for US$6.

NETSCAPE DEVELOPMENT PARTNERS

Whether you're developing shrinkwrapped software or custom solutions for your enterprise, building Internet sites with Netscape Server software for commercial or communications uses, or designing Internet content to be best viewed with Netscape Navigator, you need the tools and technical information to succeed. With the Netscape Development Partners Program, you'll be only a click away from these resources.

What is it?

The Netscape Development Partners Program is an annual subscription service that gives you the software, tools, information, and support you need to start developing products and services based on open, secure Netscape technology. You'll have the most up-to-date information on Netscape products, as well as the best tools available, to help you develop and deploy business solutions or commercial applications for your customers.

Who should join?

Any commercial or enterprise developer, creative or design professional, or VAR, system integrator, or consultant who is developing and marketing products for business use on the Internet.

What's included?

The Netscape Development Partners Program costs $495 for a one year subscription and includes the following core components:

- Regular updates from Netscape, including an electronic newsletter, email notices of product or program announcements, and participation in Netscape's developer conferences,
- Online technical information, including information on Netscape client and server application programming interfaces and programming with Java, technical documentation, and development tools documentation,
- Technical support, including online discussion groups and a technical library,
- Early access to Netscape development tools, as they become available, and
